

SPAIN PILOT PROGRAMME

Genidi Founding Network

Better-prepared families. Defined scope. Measurable learning.

90
DAYS

NON-BINDING

Genidi does not diagnose, select tests or share clinical information with prospective partners at this stage.

A difficult route to understand before the consultation.

- Incomplete or fragmented family history.
- Unclear differences between counselling, consultation and laboratory services.
- Uncertainty about which details to confirm and which questions to prepare.

OUR HYPOTHESIS

Brief educational preparation may reduce that friction without replacing professional judgement.

GENIDI'S ROLE

Organise and explain without replacing professional assessment.

01

Prepare

Organise user-provided facts and questions for a future consultation.

02

Explain

Present sourced educational vocabulary with visible limitations.

03

Connect, when appropriate

Explore a future route to verified organisations after the controls are complete.

It is not a diagnosis, risk estimate or testing recommendation.

Begin with one clearly defined service.

TRACK A

Consultation and counselling

Clinics and professionals provide assessment, counselling and explanation. Booking and care remain under their control.

TRACK B

Diagnostics with a clinical gate

The laboratory documents its scope, prerequisites and process. Genidi does not select panels, originate orders or interpret results.

From a family concern to a provider-controlled route.

01

**Private
preparation**

verification**

After approval

05

Provider route

After approval

Genidi does not send family history, answers, reports or variants to prospective partners.

A clear profile and a collaboration with limited scope.

May include

- A draft public profile confirmed before publication.
- Clear presentation of service, scope, languages and delivery mode.
- Direct participation in journey design.
- Aggregate business measurement without clinical content.

Not included in this phase

- No patient referrals or clinical inbox.
- No clinical documents, booking, payments or laboratory APIs.
- No exclusivity, guaranteed volume or paid placement.

PROPOSED PILOT

90 days to validate one journey, with no volume promises.

1-15

Validation

16-30

Design

31-75

Controlled activation

76-90

Joint review

The period begins only after the applicable verification, agreements and controls are complete. The pilot is not measured by tests sold or clinical decisions.

EARLY CONVERSATIONS

Validate one journey before deciding on a collaboration.

We propose a 20-minute call to confirm one initial service, its prerequisites, the responsible owners and whether an end-to-end fictional case is worth designing.
